

ATK HUB: new product categories

Source: official hub bundle 3.2.27 (hub.atk.pro), compared with 3.2.21. The categories first appear in 3.2.24. 55 entries in 8 categories, all vendor ID 0x373B, HID usage page 0xFF05.

Read this first. These entries are only a name, a product ID and a category ID. The bundle has no skins, photos, strings or feature code for any of them, and the whole list is registered under the mouse (BITMOUSE) controller. The product IDs follow a template (a category prefix plus repeating tier suffixes). They look like placeholders or an early teaser, not confirmed products. Nothing here is in OpenATK.
